

Progress Report - Sprint 5

Overview

In Sprint 5, significant progress was made towards the completion of the online medical system project. This sprint focused on implementing key features, addressing identified issues, and ensuring the system meets the specified requirements.

Accomplishments

- Completed the make appointment feature, enabling patients to schedule appointments with doctors based on their availability.
- Finalized the view appointment feature, allowing patients to access and manage their respective appointment schedules.
- Addressed several reported issues, including UI enhancements, database optimizations, and performance improvements.
- Conducted thorough testing of the implemented features, ensuring their functionality, usability, and reliability.

Issues/Risks

- Time constraints posed a risk to the implementation of additional features, such as medication reminders and patient history tracking. These features will be considered for future iterations.

Outcomes

- The online medical system now offers essential functionalities, including appointment scheduling and appointment management, providing a convenient and accessible platform for patients.
- The system's performance and responsiveness have been significantly improved, providing a smooth user experience.
