

Progress Report - Sprint 4

Overview

Sprint 4 aimed to further refine the online medical system project by addressing feedback from testing and implementing additional features. The focus was on optimizing performance and improving error handling.

Accomplishments

- Optimized the performance of the system by query optimizations, resulting in faster response times and improved scalability.
- Improved error handling by implementing robust error logging and informative error messages to assist users in troubleshooting issues.

Issues/Risks

- During building tests, unexpected platform error of PHPUnit was encountered.

Outcomes

- Error handling enhancements have improved the system's stability and usability, allowing for easier issue resolution.
- Tests for Appointment have been approved.

Next Steps

- Conduct comprehensive testing to validate the Login and Register functionalities.
